

bigXBRL

An Online XBRL filing platform for
MCA e-filing of Form23AC and Form23ACA

Why bigXBRL ?

Your Problems

Our Solutions

Desktop application

Once application is installed in one system, user can not change the system. In case of data corruption, back-up is not available. Moreover, Users can't work from home or on holidays.

Online Software

CD and installation required

Users need to wait for the technician to come and install the application. For any changes, user need to call the software vendor again and again.

Instant Activation

No Dashboard

Status of the users , XBRL completion and validation should automatically be provided using dashboard. However, desktop application lack this feature which makes it difficult for users to track progress.

Comprehensive Dashboard

Complicated Taxonomy

The taxonomy of current desktop applications are same as provided by MCA. However, in these taxonomies, there is lot of scope for simplification and synchronization of disclosures.

Simplified Taxonomy

No Maker-Checker

Like in banks, one person initiates a transaction and other person authenticates that. Once XBRL data entry is done, it should to be verified by professional. In current softwares, there is no such provision.

Inbuilt Maker-Checker

MCA Validation Tool errors

Most of the desktop application uses MCA validation tool for error rectification. However, the errors thrown by this tool is difficult to interpret and users are not even able to understand these errors.

Easy Validation Tool

PDF Output

To see the output after the conversion into XBRL, all desktop applications uses PDF output of MCA Validation tool. However, this output has various unwanted parents and members, which confuses users.

Online Previewer

Online Compliance

Get Instant Activation on registration of bigXBRL. No need to wait for vendor's representative to come and install XBRL software in your system. No need to keep CD for future issues. Also enjoy auto-update of application for any changes made by MCA in taxonomy. No need to download and install the patch for updating the version of XBRL software. BigXBRL can be accessed from any system and from anywhere, using secured login credentials.

Simplified Disclosure

Easy and synchronized Disclosure as per users requirement. The taxonomy of bigXBRL is highly simplified. All related disclosures are listed together under various separate heads, so as to make sure that users doesn't miss any XBRL disclosures. For e.g. In other softwares, Long term trade receivables and short term trade receivables shall be present under two different heads, whereas in bigXBRL, under the head "Trade Receivables", Long-Term and Short-Term disclosures are synchronized.

Summary Based

Reconciliation of Balance Sheet values with schedules. As per MCA Taxonomy, values of Balance Sheet must be reconciled with the values entered in related disclosures. In bigXBRL, users can easily match the values of Balance Sheet with related disclosures and know the difference (if any). Users don't need to wait for validation of XBRL output. Automatic notification shall appear on screen if there is any difference in these two values.

TANGIBLE ASSETS		
Land & Building	XXXX	XXXX
Computer Equipment	XXXX	XXXX
Motor Vehicles	XXXX	XXXX
As per Schedule	XXXX	XXXX
As per Balance Sheet	XXXX	XXXX
Difference (If any)	XXXX	XXXX

Comprehensive Dashboard

Control your data and know real-time status. For every disclosure of MCA XBRL Taxonomy, Users need to enter data, validate and generate output. It is difficult to handle such a large data, just by remembering the issues. Comprehensive Dashboard provides users a platform to control their data and know the status for all disclosures together on one single screen. Using notifications, It also alerts the user for any major validation and update for XBRL completion.

Interactive Viewer

Online View of XBRL data with Printing option. An Online Rendering Engine that enables users to view the entered XBRL data before submitting it to MCA. Its interface is designed to provide an experience, where users can easily compare Financial Reports to XBRL Reporting. Users can verify values online instead of matching various statements with PDF. User also gets Easy Printing feature with “multiple disclosure selection” option.
