COURIER AND LOGISTIC SOLUTIONS

We are working with various courier companies since 2000. Thus very aware of every need of the industry and developed a range of software to suit different perspective.

SIPL provide software for following:

- Bulk Courier Management
- Domestic Courier Management
- International Courier Management
- Franchise Courier Management System

INFORMATION KIOSK

A Kiosk is a computer based terminal or display that is used to provide information or services, typically in a public place. Kiosk systems are being used in a variety of applications, including information directories, customer self-service terminals, electronic catalogs, internet access terminals, tourism guides, and more. We offer several standard kiosk, displays and components for you business requirements.

TECHNOLOGY CONSULTING PROVIDES A TOTAL END TO END SOLUTION.

MAIL MANAGEMENT SOLUTION

Mail management software, is a full-featured, powerful, advanced system that will make your mailing operation much more productive. Its superior mailing features cover file management, data exchange, address quality, postal presorting.

IVRS

IVR allows customers to access a company's database via a telephone keypad or by speech recognition, after which they can service their own inquiries by following the instructions. IVR systems can respond with pre-recorded or dynamically generated audio to further direct users on how to proceed. IVR systems can be used to control almost any function where the interface can be broken down into a series of simple menu choices. In telecommunications applications, such as customer support lines, IVR systems generally scale well to handle large call volumes. We offer IVR Solutions that suits best for your business requirements.
