

PALASH Diagnostic

Product Portfolio

PALASH™ is a powerful, feature laden and extensively tested software that takes care of the simplest and most intricate functions in a diagnostics centre, giving the diagnostics centre the much needed competitive edge. The solution is modular and gives healthcare organizations the convenience of a flexible rollout strategy. Diagnostics centers can choose to prioritize the deployment of those modules considered critical from the organization's patient care delivery goals.

- Comprehensive
- Integrated
- Modular
- Innovative
- Offers Standard Interfaces
- Effective administration and control

Technical Features:

- Browser (Web) Based Application
- Service Oriented Architecture
- Data is stored in encrypted format
- Easily Configurable
- User Friendly
- Reports are exported to Excel, PDF and words

Major Advantages of Web Based Application:

- Avoid the burden in deploying in each client machine
- Can access from anywhere, anytime
- Platform independent
- Support and maintenance are easier
- Adaptability in mobile applications

Key feature & Modules:

- Appointment
- Registration & other details
- Billing
- Laboratory (LIMS)
- Radiology (RIS)
- MIS
- Administration
- Accounts (Tally Interface)
- Data Synchronization
- Administration

Interfaces:

- Lab Equipments
- PACS Interface
- Bar Code
- Smart Card
- Digital Pen (Prescription Writer)
- Web Cam
- Token Display System
- Financial accounting module interface

Module Details:

- Appointment
- a. Patient Appointment (New / Existing Patient)

Registration

- a. Patient Registration
- b. Sponsor Information
- c. Visit Information

Billing

- a. Billing with facility to add services
- b. Easily View and add services suggested by doctor
- c. Bill Services Refund

Laboratory

- a. Work Order Generation
- b. Template creation for Laboratory Test Results
- c. Report Delivery to Patient
- d. Interface with Laboratory Machines

Radiology

- a. Work Order Generation
- b. Template creation for Radiology Test Results
- c. Report Delivery to Patient Interface with PACS

MIS

Management Information System enables the user to retrieve information from the database in a user-defined format. Different MIS reports are provided at module level and centrally for use by the management.

Accounts

- a. Tally Interface

Data Synchronization

- a. Supports multiple diagnostics centre
- b. Master Data Synchronization from HO to diagnostics centre
- c. Patient Data Synchronization from Diagnostics centre to HO

Administration : Configurable Auto MIS through Email

Interfaces Details: -

- Lab Equipments
- PACS
- Bar code
- Smart Card
- Digital Pen
- Web Cam
- Token Display System
