

Learning Management System

Learning Management System (LMS) Academe ® is a modern **E-Learning** Software/Platform. Its highly scalable, flexible & robust Learning Management System. It offers a wonderful set of tools to make your job easier and will greatly reduce your effort dedicated to infrastructure and course management. Instead, you will be able to dedicate the majority of your time to course content. It is an **E-Learning Software** and Learning Management suit which aims to change the way traditional learning and teaching happens. Academe brings in related social web technologies and integrates them into an E-Learning platform.

The Academe suite consists of four major components:

1. **Learning Management System (LMS)**
2. **Attendance Management System(AMS)**
3. **Video Lecture Composition and Delivery(VLC)**

Academe Learning Management System (LMS) provides a range of modules used to deliver and track students learning. The tools give a social collaborative learning environment to promote learning among students. Such tools are of four major categories

- 1) **Collaboration Tools:** Group Work, Community Networking, Wiki
- 2) **Communication Tools:** Discussion Forum, Online Notes, Real-time Chat, File Exchange
- 3) **Content Development Tools:** Course Management, Assignments and test management
- 4) **Productivity Tools:** Grades, Progress

Online Video Lectures form an important part of an E Learning initiative of an institute. Streaming video lectures are virtual class lectures without the restrictions of the traditional classes. The lecture can be accessed anytime, anywhere, without installing any extra software, directly from a general web browser. It forms an exhaustive repository of all the information related to a specific course. It helps the students to make quick revisions, compensate for missed lectures or even give lectures to students as a distance learning approach.

Attendance Management System keep record of student attendance per course. It help institutes to go green, saving paper cost involved in recording attendance records. Technology used in building Learning Management System.

Ampletrails Learning Management System provide **education** providers with **e-learning system** to be able to teach students online. There are many course **management tools** which are very useful. Course material can be easily uploaded in the form of video, presentations, pictures, pdf, spreadsheets and any other types of documents one may use. Students can be assigned to the course and with provided login credentials can review the course material as well as take examinations.
