

## KIO Coaching Classes Software

---

### KEY FEATURES of our software product:

#### **Dashboard:** (elegant, accurate, interactive and with a fully responsive design)

- Each student, faculty and parent (optional) have their own login ID and password with an opening dashboard screen and role-based access to data.
- Under "My Alerts" section, our system *communicates back* to the user with display of alerts & notifications for taking the necessary, corrective action.
- Favorite reports can be defined for each user as per need, so a frequently used report can be defined as "favorite" and accessed from the dashboard screen itself with a single click (instead of searching from a list of reports under Reports menu)
- A Comparative Analysis section containing various graphs whose parameters change dynamically depending on who has logged in. For example, a student will see parameters relevant to that student's individual profile only, whereas a faculty member will see all students' data belonging to the batch assigned to that faculty.
- Notices and updates can be posted by Faculty on the dashboard screen in real-time for viewing by all.

#### 1. Transaction screens: (with quick Search facility)

##### 1. Enquiry, Follow-ups and Registration Management:

- Counselors/Administrative staff can record enquiry related basic student data with name, contact, course/subject and branch of preference
- The Follow-up screen can record status with dates to pursue candidates for enrollment and has in-built SMS and email integration for auto-reminders to students & faculty
- Student can be registered from the Enquiry screen itself.

##### 2. Fees Management:

- Record student-wise fee payment details such as fee amount, discount, taxes, mode of payment, installment number, balance amount, due date etc. can be recorded
- Next installment due is sent as an SMS/email reminder to the student and/or faculty and also on the dashboard under "My Alerts" for follow-up and closure.
- Fee payment reminders appear automatically to students and parents on their respective dashboards and can also be auto-sent as SMS to their mobile numbers in advance of due date to avoid delays and penalties.

##### 3. Profile screens:

- Student Profile: basic details + mapping to branch, course, batch, subjects, shift and division. The system can attach multiple documents (scans, PDF etc) for each profile.
- Parent Profile: basic details (mobile number and email ID are stored for automatically sending messages)
- Faculty Profile: basic details + qualifications/certifications/experience with mapping of each faculty to branch, course, batch, subject and batch timing.

#### 4. Attendance:

- Recording of all students' attendance in each class by the teacher/trainer normally takes about a minute or so using our software.
- Our software application can be integrated with biometric machines that store punches in a database, preferably MySQL.
- Auto-triggering of SMS and/or email to parents for absenteeism for a subject and/or for the entire day is possible.

#### 5. Test Schedule:

- Faculty or Administrator can define test schedules well in advance
- Upon publishing the test schedule, alerts are displayed on the student, parent and faculty dashboard under "My Alerts" section automatically as a notification
- For changes (especially last-minute) in test schedules or change in lecture timings, an SMS and/or email can be sent automatically to a batch of students on a single click.

#### 6. Performance Management:

- Once actual marks are entered, % and grade is automatically calculated by the system
- Student Performance summary can be displayed on the Dashboard branch-wise, batch-wise, subject-wise, score-wise, level-wise etc.
- Our software can also move the students to a higher level after each Test score, assign new faculty and also allocate the new classroom, if required.

#### 7. Library/Material Management:

- System has features to receive books, bags, joining kits, stationery etc.
- These materials can be issued by a librarian or store-keeper and record their return
- Alerts are displayed on the Dashboard if item stock level dips below minimum level, non-returned materials etc.

#### 8. On-line MCQ and Subjective Test:

- We have screens to define MCQ questions, options and the correct answer.
- To ensure only a valid student is taking the test, we enforce validation methods such as OTP verification to the student's registered mobile number for authentication.
- Tests have a count-down timer to ensure students submit their answers within a defined time-frame. The Test screen de-activates once defined time period is over.
- Questions for each student taking a common MCQ test are shuffled in a random sequence to avoid copying, cheating or anticipating next question.
- At the end of the Test, results can be seen immediately by students, parents and faculty.
- MCQ and Subjective results for a batch are accessible to the relevant faculty on the dashboard screen. They can evaluate and give marks to Subjective answers on the system itself, making it a fast, paper-less environment.

#### 9. Student Deviation:

- To record student behavioral issues/indiscipline/inappropriate behavior in class
- Relevant student's parent get a pop-up link on their dashboard under "My Alerts"
- An SMS and/or email can be sent to parent's mobile number automatically

#### 10. Student Feedback:

- Students can give a 360 degree confidential feedback about the Faculty, Infrastructure, Training effectiveness etc. to the Class management as a feedback for improvement or can use positive feedback as testimonials.
  - Consolidated feedback with ratings for the quarter and year can be visible on the senior Management dashboard for immediate corrective and preventive actions.
- 

### BENEFITS

#### Reminders & Alerts

- KIO coaching class software bridges the gap between the Coaching Institute, students and parents by regularly sharing attendance, performance, fees and other important information.
- Alerts and reminders set on the individual user's dashboard screen can help them prioritize and quickly take some action.

#### Performance & Progress

- When interfaced with bio-metric device, student's attendance record can be tracked
- System can benchmark student's progress levels based on certain measurable parameters

#### Installation & Access

- Being completely web-based, users only require a browser (Firefox, Chrome, IE etc.)
- Students, Parents, Faculty of the Classes can access the system on their desktop PC, mobile, tablet PC or a laptop or in short, any device.
- Customization of screens to suit the Institute's specific requirements is possible

### SUBSCRIPTION or PAY-PER-USER (SaaS) MODEL

- One of the biggest advantages of KIO classes software is low priced subscription model
- With our simple, user-friendly interface, the Coaching Institute can use the system effectively
- Periodic upgrades to KIO software are offered free of cost to all our subscribers, since it is hosted on-line on servers that are available 24x7 throughout the year.
