

iSoty is a browser based menu driven software that can easily be used by anyone with basic knowledge of icons and drop down menu choices.

Our key features are;

Dashboard

Dashboard gives you a quick information/access about society activities.

Trouble Ticket

Manage facility issues with integrated trouble ticket management.

Billing and Receipts

This tool helps manage billing for each member and maintain receipt at one location. Receipts can be generated for all types of payments and stored in central location for later retrieval

Asset Management

Asset management is a cumbersome situation in many societies. Our program helps with maintaining records and service related issues for timely evaluation of assets at any given time.

Discussion

Discussion module is a key feature that helps management gather quick opinions on various issues related to community management.

Reports

Reports are essential part of well managed communities. This module helps in generating PDF reports at a click of a button. Here are some of example of reports; Income, Income and Expense report, Items report, Visitor log report & much more.

Society Documents

Storage and retrieval of organization document. No need to skim through filing cabinet.

Event Management

Go ahead and host event for yourself or for the entire society/association and send invitations online. Maintain calendar bookings for the same displayed in event calendar.

Accounts

Update ledger for everyone to see based on this, generate income and expense statement(s) for member(s) to see. This helps in maintaining transparency. Integration with popular accounting package for audit requirements.

Employee Management

Employee management provides facility for maintaining records of employees, shift allocation, attendance registry and helps in processing payroll for every employee.

Opinion Poll

Very helpful tool for conducting elections and get quick opinions /feedback on any topics.

visit www.isoty.com

➔ User Management

Very useful management tool for adding and configuring new members along with controlling access for features.

➔ Facility Management

Facility management tool allows users to know the availability of community facilities such as game rooms, party hall, meeting rooms etc. This will help the management of not having a dedicated person in-charge of facility booking.

➔ Groups

Groups are popular with people who want to have some exclusivity with other community members hence this tool is useful in creating online groups for discussion purpose, planning an event, running activity based events etc.

➔ Announcements

Announce the critical issues via the announcement module on the web and through the email. Trace all the announcement at central location for clarity.

➔ Community News

Want to publish the event details/news/picture's, we have module for publishing the news to community members.

and much more
