WEB BASED INTERFACE

RAPID DEPLOYMENT

P4P Cloud Enterprise Quality Management System (EQMS) developed by Integrum is a proven, globally deployed integrated management system.

Integrum software has been developed and has in excess of 200,000 users across more than 40 countries.

Specifically engineered to manage physical/operational risk. QHSE Management Systems (9001, 14001, 18001, 22000) & Risk Standards (AS4360, ISO 31000)

P4P Cloud EQMS is a true Integrated Management System (IMS). Rich functionality, highly configurable, fully integrated

Unique capabilities. Business Intelligence, Mobility, Integration, Deployment expertise

P4P Cloud EQMS is offered as one application, so that all functionality (unlimited users) is provided as part of a single license.

P4P Cloud EQMS is a solution that is rich in functionality and yet highly configurable.

The software, out of the box, contains all functions required for real time incident and action management and reporting, investigation management, risk & compliance management, controlled document management, audit management (and scheduling), contractor management, training and performance management and includes a world-class (rich & sophisticated) business intelligence capability for reporting, collaboration, analysis and dashboard development.

While the term 'highly configurable' is generally over-stated when affiliated with software products, P4P Cloud EQMS is genuinely recognised as 'highly configurable' due to its soft coded eForm designer, flexible workflow engine, portal builders and sophisticated Business Intelligence engine which provide an extremely flexible out-of-the-box system that requires minimal configuration and in many cases, no customisation at all.

Contact us to discover how P4P Cloud EQMS can streamline your QHSE Risk & Compliance business processes.

Integrum

Cloud EQMS Management Systems

What makes P4P Cloud EQMS unique?

P4P Cloud EQMS is offered as one application, not in modules so that all the functionality is provided as part of the enterprise-wide license. We also provide unlimited users licensing, inclusive of **Cloud EQMS** Business Intelligence software, so there is no need to purchase additional users licenses or concurrent seats as the business grows or as the solution is deployed more widely i.e. contactors etc....

- **Cloud EQMS** is fully web enabled, with access via web browser.

- Mobile device via web connectivity and in addition, **Cloud EQMS** provides native (companion) iPad & iPhone applications for incident capture as well as a (native) Mobile BI application for access to reports, dashboards, collaboration, subscription and shared analysis both in online & offline.

- Designed to operate on a centralised database and server system with full security and with full integration with your email system and existing identified systems.

- Full editor functionality via a standard web browser or rich client for all functionality. It will also interconnect with various email systems i.e. MS Exchange/Outlook, etc. via Active Directory for notifications and escalations.

- **Cloud EQMS** architecture allows it to be easily integrated in real time or batch mode with other systems including SAP, PeopleSoft, Oracle, Mincom, ERP systems, Trim, MS SharePoint, Lotus Notes, SQL databases, and more.

- Reduce the time and cost of gaining and maintaining certification to ISO 9001, 14001 and 18001. The benefits derive from the inherent systems and processes within **Cloud EQMS** for ISO management including controlled document management and control, version control, corrective action workflows, implementation and integration within daily work practices, etc.

Fully integrated Business Intelligence module

Rich Business Intelligence functionality is deeply embedded and seamlessly integrated within the **Cloud EQMS**, providing a full range of rich reporting templates to create and generate real time reports, graphs, tables and dashboards from any data set. In addition, our **Cloud EQMS BI** tool allows full export capability to products such as Adobe PDF, Microsoft Excel and Microsoft Word.

About Integrum
