

OZ e-FORM

Enterprise e-Form Solution

OZ e-Form is an enterprise e-Form solution converting traditional contract paper into electronic form on mobile devices, enhancing the value of paperless transaction. Based on XML, it supports dynamic forms and business logics with a small transfer size. Insurance, bank, hospital and field service providers have successfully increased productivity and moved towards a green working environment with OZ e-Form.

Efficient business process

Document Security

Save money, time, and labor

Go Green

Best performance based on XML

Transaction size using XML is remarkably smaller and faster than other image or PDF based solutions(around 100k/page without image).

HTML5 based e-Form supports any kinds of browsers

There is no need to develop individual e-Forms for various browsers.

Rich data input components

Various input components like combo box, text box, check box, radio button, camera, voice recorder, barcode scanner, etc. are provided.

SSCP (Single Source Cross Platform)

One single e-Form file can cover any platforms (Windows, iOS, Android) and devices (desktop, tablet PC, and smartphone).

Dynamic forms with business logics

Users can put business logics and workflows beyond fields on e-Form and manage dynamic forms which can display different forms based on field selection.

Powerful e-Form design tool

A professional designer tool can develop complicated enterprise e-Form. For the non-technical, a simple tool with MS Excel can create simple forms.

Integration with other systems through XML/Web service

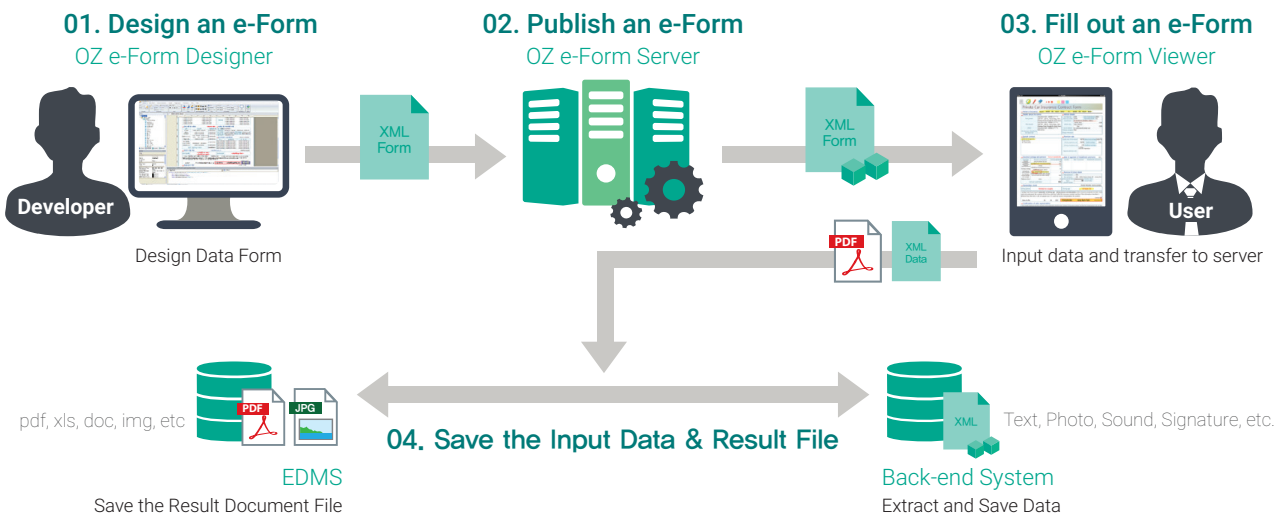

e-Form can be converted to XML and integrated with any databases and systems through Web service.

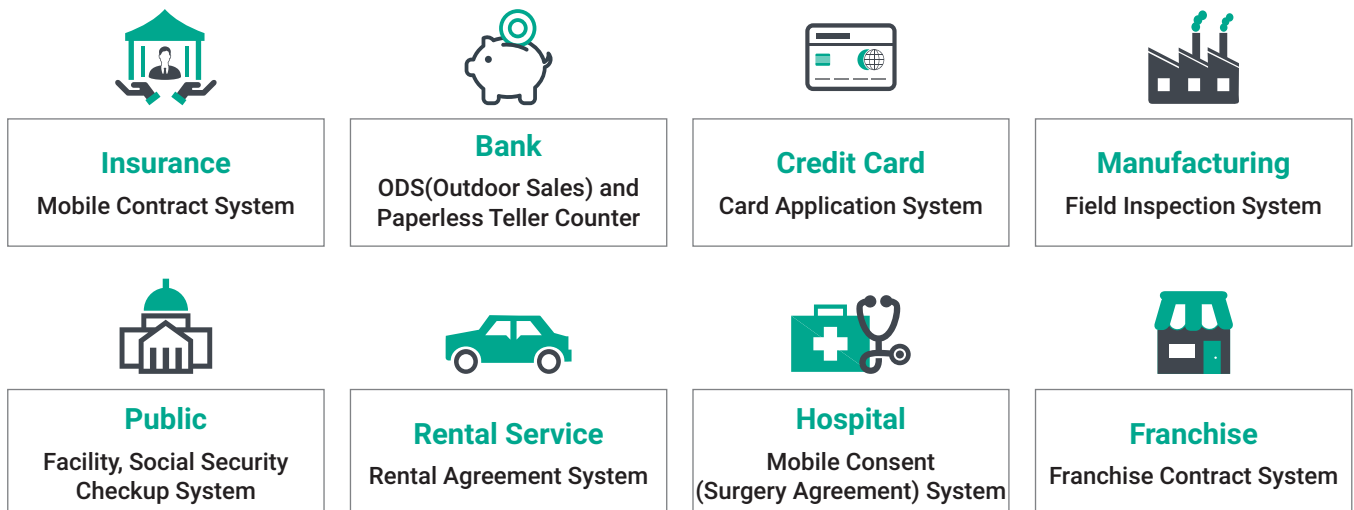

Offline on the field

For the cases of offline, all input data on e-Form will be saved in device and synchronized with server later when network is available.
