

CABOOKIE BASIC - INSTALLATION GUIDE

1. Download the source code attachment file, unzip/extract it and save it in your device.
2. Open any FTP Manager and connect to your server.
3. Upload the unzipped files to domain specific folder.
4. Open any browser and go to your domain.
5. You'll redirected to Cabookie Installation page.
6. You need to create a MySQL database in your server.
7. Enter Database Host, Database Name, Database User & Database Password and click "**Connect Database**" button.
8. Once the database is connected successfully, click "**Install Cabookie**" button once you're ready to proceed further.
9. After Cabookie has been installed, create Dashboard login details to access the Dashboard.
10. Login to Dashboard "**<yourdomainname.com>/dashboard/login.php**" and update the following mandatory details for your website to start receiving bookings.
