

Experience a quantum leap in business process efficiency and agility.

Organizations need to add speed and agility to their Business processes, to meet market demands in an increasingly dynamic environment. As a business leader and decision maker, getting a single and holistic view of your data is just the first step. Being able to tune existing processes or create new ones, based on that intelligence is what takes it to the next level or forward. And that is where the wheel stops. Process efficiency and agility are among the biggest business challenges organizations face. Traditional processes often create gaps between the business goals and operational performance, thereby hampering growth. Moreover, in today's complex IT scenario with multiple systems and platforms in an enterprise, having a Business Process Management Solutions (BPMS) suite that is simple and easily integrates with your existing IT assets and environment is even more critical.

Introducing IntelliPROBPMS. A first of its kind and best-in-class BPMS suite that helps you define, manage and change your processes on the go, to realize optimal productivity and higher value. Get set to experience the quantum leap.

The best of both worlds on a platter:

IntelliPROBPMS comes with built-in tools that allows you to design, manage, analyze and integrate all critical and relevant processes. It's features are a dynamic combination of innovation, automation and agility, offering you the best of both worlds (build & buy). Other useful features include:

➔ Built-in functionality:

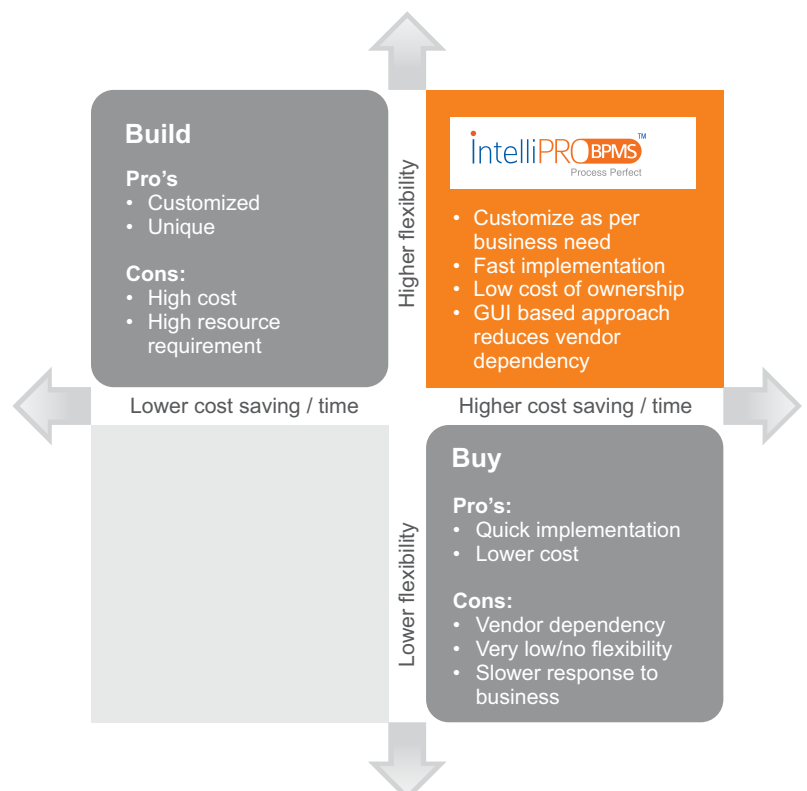

Improvements and implementations, conveniently built into the suite. Enabling users to model, simulate and implement processes.

➔ Cohesive development environment:

Integrated into IntelliPROBPMS, these tools are designed to work together, simplifying implementation and management.

➔ Graphical development tools:

Supports graphical development of process based solutions instead of complex and highly technical coding. This speeds up development significantly and also reduces reliance on technical resources in deployment of BPMS.

Verticalized for your ease and convenience:

IntelliPROBPMS can be easily custom configured across verticals as diverse as aerospace and defense, automobile, banking and finance, manufacturing, telecom, BPO, amongst others.

Take advantage of improved enterprise mobility:

Mobility is something no enterprise can afford to ignore or not factor in. Penetration of these devices and applications are radically transforming how organizations engage their customers and do business. As mobile devices become pervasive and present in every aspect of business, take advantage of the improved enterprise mobility offered by IntelliPROBPMS:

- ➔ Build and deliver composite applications and processes on any device to the target group.
- ➔ Right blend of native mobile application and HTML 5 based technology with a lightweight yet powerful solution built on open technology.

Deliver required information to the right people, wherever they are to enable the right action or decision.

Enjoy 100% portability, security and reliability with our cloud option:

Apart from cost benefit and easier disaster recovery management, the use of cloud can drive businesses to adopt emerging technology, embrace growth opportunities and achieve increased efficiency. IntelliPROBPMS is available as an on-demand Platform-as-a-Service (PaaS) offering. Thus combining process and work orchestration with innovations in social collaboration, enterprise mobility, and cloud computing. Solutions built on IntelliPROBPMS are 100% portable between on-premise and cloud computing deployment options thus avoiding cloud lock-in with full portability of enterprise data and solutions. Other benefits include:

- ➔ Scalable option to create a nimble organisation
- ➔ Low start-up costs
- ➔ Fast and flexible deployment
- ➔ No manual maintenance
- ➔ Predictable costs during the life of the application
- ➔ Faster ROI
- ➔ 100% secure cloud solutions
- ➔ High levels of reliability, tough to match even by the best internally managed environments
- ➔ Customers can increase server capacity without wasting time or incurring huge costs

Acquire the IntelliPROBPMS edge for your enterprise:

Here are the multiple benefits this edge translates into for your enterprise:

Cost efficiency

Making your operations cost efficient requires more than merely down-sizing budgets. Companies that plan for future growth of their business recognize that effective implementation of BPMS technology can help significant savings in the medium to long term.

Business agility

Business agility is important in uncertain economic times. As technology cycles change ever so quickly, businesses are constantly striving to cut cycle times. Any organisation looking to achieve business agility must embrace process management, integration and automation.

Compliance

Responding to changes in legislation is an important consideration for your business. If companies do not have an agile, flexible system for handling compliance, it can be costly. Within BPMS systems, you can build compliance into your business rules.

Customer centricity

The advent of new technologies has rapidly changed the way consumer facing companies interact and engage with their customers. Companies have to respond faster than ever before. IntelliPROBPMS can help you interact with your customers in new ways and help you improve interaction with your customers.

Employee satisfaction

Most organizations are engaged in a continuous effort to create and sustain a rewarding work environment that mobilizes and motivates its employees and staff. Managers can view real-time process performance and proactively manage bottlenecks.

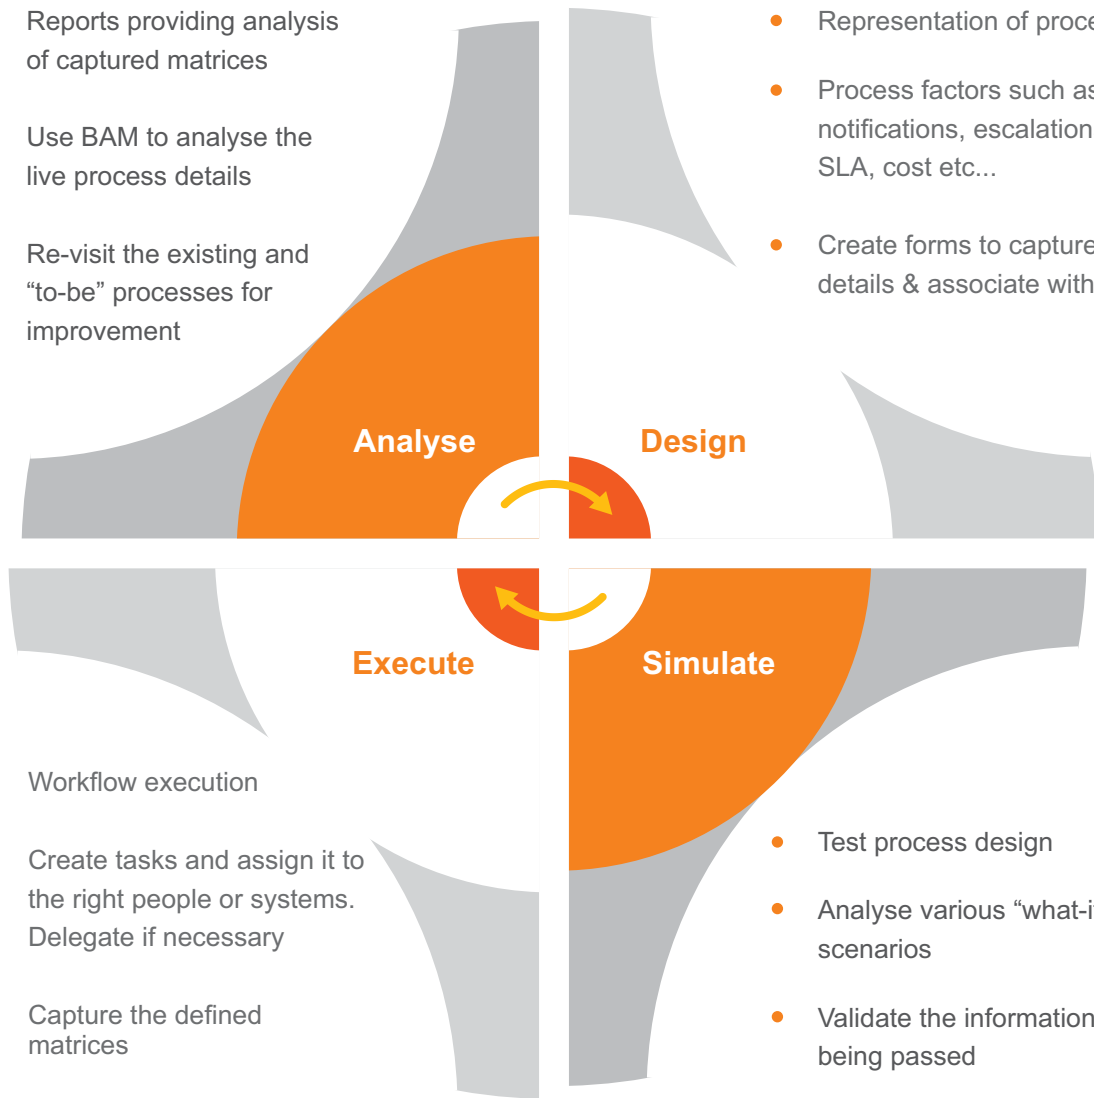

Return on investment

Investing in IntelliPROBPMS yields tangible results. Its measurement metrics dashboard, provides an accurate assessment of resources, even with existing legacy systems.

IntelliPROBPMS - How it works?

- Reports providing analysis of captured matrices
- Use BAM to analyse the live process details
- Re-visit the existing and “to-be” processes for improvement

- Representation of process flow
- Process factors such as alerts, notifications, escalations, SOP, SLA, cost etc...
- Create forms to capture details & associate with process

- Workflow execution
- Create tasks and assign it to the right people or systems. Delegate if necessary
- Capture the defined matrices

- Test process design
- Analyse various “what-if” scenarios
- Validate the information being passed

Key features

Design and model	Manage and Execute	Analyze	Integrate
➔ Process composer	➔ Work manager	➔ Business activity monitor	➔ SharePoint
➔ Form designer	➔ Control panel	➔ Report with desired KPI's	➔ SAP
	➔ Rules engine		➔ Oracle
	➔ Resource calendar		➔ DB2
			➔ MS SQL
			➔ Legacy apps
			➔ PeopleSoft
			➔ Others

About Intellileap: Founded in August 2012, Bangalore-based Intellileap, is a Microsoft BizSpark and a HP Alliance One partner. It has a product development center in Bangalore and plans to open offices in Kuala Lumpur to serve the Asia-pacific market and another in the US East Coast to serve the North American market. Vignesh Hebbar - an experienced industry professional co-founded Intellileap with Badrinath Kamath - a successful multi-venture entrepreneur with the vision of identifying, developing and offering user-friendly and automated products to enterprises worldwide. Intellileap's product-driven service offerings include Application Development, Product Training, Cloud Services, Maintenance and Support, Mobility Services, Business Process Re-engineering and Consulting among others. These can be leveraged by a range of industries - Automotive, Aerospace, Defense, Healthcare, Manufacturing, Telecom, IT, Insurance, Education, Legal, Marketing & advertising, Retail, etc.
