

# EPS

Enterprise Pharmacy System

## Why Choose PDX EPS?

With the PDX Enterprise Pharmacy System, you can find everything you expect in a pharmacy software program, but EPS offers so much more than any other pharmacy systems and continues to add new offerings and technology partners to help your business grow and stay ahead of the competition.

Beyond the expected security, features, integrations, and Windows-based, easy-to-use system, EPS offers various unique modules and modes of operation.

## Cloud EPS™ or EPS Distributed

EPS is still offered in the traditional distributed method that allows you to house your own servers and systems, but now we are introducing Cloud EPS for pharmacies who want to reduce the in-store hardware footprint, gain the availability to the application and data from any location on the customer network, and reduce the burden on customer resources for some data management and technical and hardware issues. This benefit is particularly valuable in the event of a disaster.

Data security is also enhanced by residing in Cloud EPS. The centralized location, controlled access, and threat analysis services minimize any opportunity for a security breach or loss of any data due to a catastrophic event.

## Adherence and Compliance for 5-Star Rating with Care Rx®

Like other pharmacy systems, EPS can easily link to a Medication Therapy Management system/vendor, but we go above and beyond by also offering Care Rx®, the ultimate interoperable clinical services platform. Care Rx enables you to fully complete the MTM, counseling, and adherence process, thus increasing your ability to receive the CMS five-star rating and improving patient health and pharmacy loyalty. Let us show you how Care Rx can maximize efficiency of your clinical service offerings.

## Specialty Pharmacy Module

Take back your specialty drug business! The Specialty Pharmacy Module in EPS Workflow enables pharmacists to:

- efficiently process specialty prescriptions by using specific clinical tracks to direct specialty medications to the appropriate workstation and team member
- enter multiple payment types
- use shipping options
- define premade compounds centrally (such as at headquarters)

## Remote Pharmacist Module

Now your pharmacists can perform counseling, verification, and other tasks from anywhere within your network as part of our alternate site processing ability in EPS Workflow.

## Two Implementations

You can implement EPS as RapidFill® or Workflow. The best fit for your pharmacy depends on fill volume, staff, and other business needs. To compare:

### Workflow offers

- More segmenting of tasks for pharmacies with high-volume filling and staff for the various roles
- Workflow you can manage based on staffing, volume, and business needs that delivers the right task, to the right user, at the right time by separating tasks into distinct workflow steps, or queues
- Alternate site processing, which enables pharmacists to perform counseling and verification tasks from a remote location and allows you to use central call centers to process refill requests, accept new verbal prescriptions from prescribers, perform Data Verification, and process third party exceptions
- The Specialty Pharmacy Module that empowers you to efficiently process specialty prescriptions
- Promised-time engine that ensures prescriptions are ready when the patient comes to pick them up

### RapidFill® offers

- Quick-fill operation for pharmacies that only want to segment a few tasks and use minimal staff
- Small store footprint with an innovative in-store technology but without a huge learning curve
- Long-Term Care (LTC) Module for batch processing of prescriptions for servicing long-term care facilities
- Optional NDC Scan at fill allows pharmacists to perform NDC verification of the dispensed drug against the stock bottle

**“EPS coupled with Care Rx enables you to fully complete the MTM, counseling, and adherence process, thus increasing your ability to receive the CMS five-star rating”**

## Our Staff: Better Minds Building Better Software

Our employees and our philosophy of working WITH our customers is what empowers us to create exactly what our customers need. By working with you and technology partner vendors, PDX can offer you the best long-term strategic partnership and technology solutions at the right time.

With our innovative technology and our commitment to our customers, EPS is the solution to your ever-changing pharmacy needs.
