- Business Suite on HANA Conversion Projects.
- Migration of SAP Enterprise Solutions to SAP S/4HANA
- Cost effective retail open source E-commerce solutions on SAP HANA platform along with POS and multisystem integration with SAP
- Strong Manufacturing Expertise in discrete, process and Co-By product manufacturing.
- Open source solutions for Dealer & Distributors tightly integrated with SAP Back-End.
- Open source E-commerce solutions for B2B and B2C tightly integrated to SAP.
- GST conversion Projects for Malaysia, Singapore and India

Our SAP Integrated Solutions - Overview

CCT has invested a lot in building cost effective solutions on top of SAP, most of them are built on open source technologies. This will help SMEs to reduce the TCO of SAP implementation and at the same time address the specific business needs.

These solutions are seamlessly integrated with SAP backend system and are delivered as packages.

Cost Effective Omni Channel Solutions for Retail, B2C and B2B

- E-Commerce Portal & Mobile Apps
- Web Portal & Mobile Apps for B2B Customers, Dealers & Distributors
- Web Portal & Mobile Apps for Sales Agents

Cost Effective Solutions for Purchase Approvals and Employee Time Mgmt.

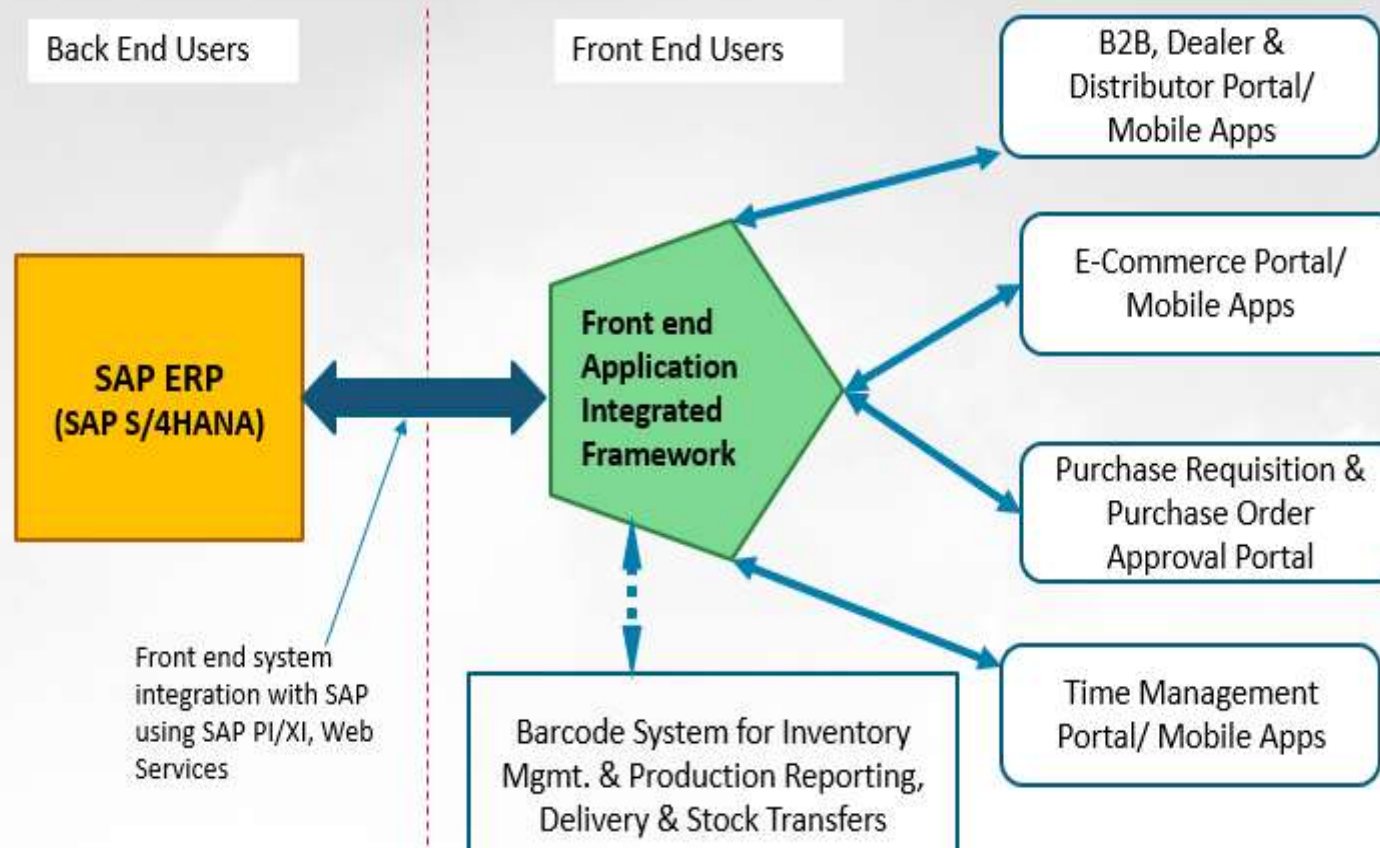

- Portal for Approvals – Purchase Requisitions & Purchase Order
- Portal/ Mobile Apps for Employees to Request Leaves and Time entry

Integration with Barcoding systems

- Barcode systems for Production Reporting, Inventory Management, Delivery and Stock Transfers

SAP – Front End System Integration

Advantages of Integrated Systems

- All the business data will be stored/ Updated in SAP, thus enables the business to utilize the complete functionalities of SAP ERP.
- As we use a single framework to connect all applications with SAP, simplified middleware and better control.
- Total Cost of Ownership will be less for the implementation.
- The front-end applications are built in best in class technologies.
- Real-time data for all users – order status, inventory, approval status, etc., on real-time.
- Flexibility and Portability – orders can be placed from anywhere, anytime by a customer, sales agent, dealer or a distributor.
- Advanced SAP Logistics planning and distribution framework developed in SAP to cover multi channel distributions and retail stores distribution.
- Scalability – these solutions are scalable and can be used with SAP's latest innovation products.
- Single Source of Information – the architecture is based on SAP as central system and all master & transactional data will be stored in SAP. The connected front-end systems facilitates the users to interact with SAP in a more flexible way. SAP remain the source of data, thereby ensuring data integrity.

E-Commerce Portal & Mobile Apps for Online Retail Stores

Online Retail Solutions built on open source e-commerce platform Magento and integrated with SAP. The Omni-channel e-commerce system communicates with SAP back end in real time.

Features & Advantages

- Web portal and Mobile Apps (Android & iOS) for Customers
- Customer registration & login from multiple devices
- Real time store level inventory across multiple cities/ business areas
- Payment Gateway & Paytm wallet integration
- Card/ Cash on delivery
- Different product catalogs and pricing for different cities/ business areas
- Promotions & Discounts
- IVRS system for Customer Care call centers integrated with the front end
- Mobile apps for Delivery boys
- Automated production & warehouse management using barcodes & scanning devices
- Customer notification via e-mails and SMS

Web Portal & Mobile Apps for B2B, Dealers & Distributors

B2B Customers, Dealers and Distributors can place their orders using the portal/ mobile app. The orders will be processed from the SAP back-end.

Features & Advantages

- Faster operation – No wait for e-mail confirmations and offline stock updates.
- Flexibility – Orders can be placed from anywhere, anytime.
- E-commerce portal like user experience – fast check out
- Real time inventory information
- Different pricing and discounting for different customers/ dealers/ distributors – individual or group level.
- Order history & Payment history on a single click
- Online payment options
- Faster order fulfillment
- Online credit check option
- Order status updates and notifications

Mobile App for Sales Agents

Mobile App for Sales Agent displays the product catalog and price details, so that they can place orders on behalf of the Customer. Such businesses can use this solution to improve the productivity and efficiency of the process.

Features & Advantages

- Sales Agents can place orders online from the Customer's premises. Orders will be placed in SAP immediately.
- Sales Agents can log-in to the App using a user name and password
- Order history and Status of orders are available on a single click.
- Sales Agents' actions will be recorded and can be monitored.
- Weekly and Monthly analysis is possible in the App, thus reporting can be done easily.
- The App accessing live data from SAP, enabling the Sales Agent with real-time data.
- Real-time inventory details available to the Sales Agent.
- Sales men can maintain their activities as well as the leads in the app.

Portal for Approvals – for Purchase Requisitions

Multi level approvals can be configured in this portal. The portal uses data from SAP, and the users will have profiles maintained in the portal with access credentials. Decision makers can approve certain requests by logging in to the portal and after all approvals, final status will be updated to SAP. Further processes to be carried out in SAP.

Features & Advantages

- The portal facilitates requisition for purchase and approval processing outside the SAP system.
- Multiple levels of approvals with joint approvers.
- Notifications by e-mail to the approver when a request for approval registers.
- Flexibility – The portal can be accessed from any device
- The approvers need not be an SAP user.
- SAP remains the source of data and final approval status will be updated to SAP to continue further processing.
- The conditions and limits for approval can be set in the portal

Portal/ App for Leave Request & Time Entry

This portal/ app helps employees to make their leave requests and time sheet entries. Leave requests will be forwarded to the Manager and based on the decision, further action will be taken in SAP and the portal. The sender of the request will be notified via e-mail regarding the response of the manager.

Time sheets can also be maintained using this portal. Attendance will be marked in the portal, and is integrated with the SAP during the payroll run.

Features & Advantages

- All employees can maintain their timesheet and request for leave using the portal and are not required to have an SAP user id.
- The portal/ app is accessible from anywhere, anytime
- Notification mails will be sent to the requester and approver during each stage of the workflow.
- The portal/ app is integrated with SAP and the data from the portal/ app will be used in each payroll run.

SAP S/4HANA – The Next Generation ERP Suite

Our expertise in the latest innovation technology, S/4HANA helps businesses to compete in the digital economy. S/4HANA built on SAP's advanced in-memory platform, SAP HANA, and offers a personalized, consumer-grade user experience with SAP Fiori.

Advantages

- High Performance – in memory operations powered by SAP HANA
- Agility – intuitive user experience using Fiori
- Simplicity
- Reduced TCO
- Innovation
- Cloud, On-premise and hybrid deployment
- Can be accessed by multiple devices
- Real time insights and analytics
- Seamless integration with the digital world

GST Implementation

As GST will be rolled out soon, we offer our services to help businesses get compliant with the new law and ensure benefits from GST with SAP. SAP is a key enabler of business' migration towards GST compliance and of the subsequent realization of improved profitability from business core transformation.

We have expertise in GST implementation for India, Malaysia and Singapore.

- GST File upload
- Bad debt release & recovery
- GST Audit File Generation for upload
- Monthly invoice upload
